

Colors

The color palette chosen was thought on the universe, that is why the strong cyan. This is to stay true to the concept of *exploring the universe*.

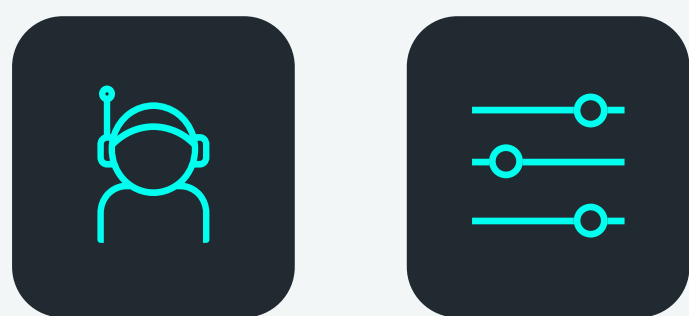

Illustrations

The isometric-tech illustrations are used to help the concept of exploring. The user is the astronaut, and he will be exploring the universe of flags by dragging around the map to choose the perfect location.

Icons

The icons follow the same style as the rest of the navigation button which is a linear and cyan stroke. This way the navigation button is not as heavy for the eye and helps to point direction to our main focus: the start/stop button.

Main button

It was considered always to be the primary action and the most visually to the eye to scan because it does the most important task: to connect, which is the whole idea of a VPN app. By situating it in the bottom center, it is easier for the user to reach it because of Fitt’s Law: “The bigger an object is and the closer it is to us, the easier it will be for us to reach it”
